

Green Source Holdings Announces Craig Wentworth Joins As Top Engineer

AUSTIN, TEXAS (July 24, 2017). Green Source Holdings LLC (“GSH”) announced today the addition of Craig Wentworth as Senior Vice President, Engineering for GSH and Chief Operating Officer of its subsidiary, Austin Rubber Company. “We are excited about the addition of Craig to our team,” said GSH’s Chief Executive Officer, Fitz Lee. “Given his decades of technical, hands-on experience with some of the most complicated production facilities in the world, Craig will provide unparalleled leadership for our businesses,” continued Lee. Donald Drew, President of Austin Rubber Company, added, “We are fortunate to attract someone of Craig’s caliber to lead the company’s operations so we set the standard in our industry, just as Craig set the standard in gas processing.”

Wentworth was most recently Midstream Manager of the Technical Service Group for XTO Energy, where he provided support to various large international projects for ExxonMobil. Previously, Wentworth was General Manager of the Process and Treating Division for the Hanover Company and President of T.H. Russell Co. Wentworth’s experience includes design engineering, project management, operations and sales for the gas processing industry. He is viewed as a leading engineer in his area, with particular expertise in plant construction, start-up, and commissioning. In addition, he is an expert on developing turnkey, modular production facilities.

About Green Source Holdings LLC

Green Source Holdings LLC, founded in 2007, is a privately held company that operates businesses in resource efficiency opportunities. The company is headquartered in Austin, Texas, with offices in Houston, Dallas, College Station and Greenville, Pennsylvania. GSH’s businesses include: Austin Rubber Company which upcycles scrap tire rubber into a high-quality virgin rubber substitute using a patented devulcanization process; Octavo Systems which designs cutting edge system-in-package semiconductors to provide “internet-of things” capabilities and unprecedented integration and flexibility for system designers; and Tredagain, a leading brand of sustainable footwear.
